15. SUPPLEMENTARY NOTES

16. ABSTRACT

This report provides data on the use of sanitary landfills (Subtitle D facilities) for hazardous waste disposal in Florida by small quantity generators. It consists of eleven parts including a part called Study Area Data which contains the data aggregated across the counties covered in the report, and ten parts containing data at the individual county level for all 67 counties in Florida. Each county is described in terms of location, economic profile, and demographic characteristics. In addition, information is provided on permitted sanitary landfills that are currently active in Florida. This report contains survey data from approximately 19,000 hazardous waste generators that reside in 514 industries identified by four-digit Standard Industrial Classifications codes. The hazardous waste data are cross-tabulated and displayed in the following seven configurations: types of waste generated (26 types); management methods used (14 methods); types of wastes disposed in sanitary landfills; SIC generating waste; types of waste generated by SIC; management methods used by SIC; and waste types by SIC by management method. The last cross-tabulation consists of 14 sub cross-tabulations, i.e., one for each management method. There are identical sets of crosscounty data (i.e., each county has a set of 7 cross-tabulated tables.)

The information in this document has been funded wholly or in part by the U.S. Environmental Protection Agency under Grant No. CR-813151010 to the Florida State University. It has been subject to the Agency's peer and administrative review and it has been approved for publication as an EPA document. Mention of trade names or commercial products does not constitute endorsement or recommendation for use.

FOREWORD

This research was conducted in order to provide information to the U.S. Environmental Protection Agency that relates to the use of RCRA Subtitle D facilities by small quantity generators of hazardous waste. One area of concern that relates to RCRA Subtitle D facilities is the effectiveness of monitoring programs at these facilities. An important component in assessing monitoring programs at RCRA Subtitle D facilities is the data on the composition of wastes managed at these facilities. The purpose of this report is to provide to the EPA data on small quantity generator hazardous waste that is managed at RCRA Subtitle D facilities in the State of Florida, with a particular emphasis on sanitary landfills.

This report consists of eleven parts. Parts I-X of the report are called County Data and contain individual county data for those counties included in each of the first ten parts of the report. Part XI of the report is called Study Area Data and it contains data aggregated across all of the 67 counties in the State of Florida. Each county is described in terms of location, economic profile, and demographic characteristics. The specific counties that are included in Parts I-X of the report are the following:

Part I: Alachua, Baker, Bay, Bradford, Brevard

Part II: Broward, Calhoun, Charlotte, Citrus, Clay, Collier

Part III: Columbia, Dade, De Soto, Dixie, Duval

Part IV: Escambia, Flagler, Franklin, Gadsden, Gilchrist, Glades, Gulf, Hamilton, Hardee, Hendry, Hernando, Highlands

Part V: Hillsborough, Holmes, Indian River, Jackson, Jefferson, Lafayette

Part VI: Lake, Lee, Leon, Levy, Liberty, Madison, Manatee, Marion

Part VII: Martin, Monroe, Nassau, Okaloosa, Okeechobee, Orange

Part VIII: Osceola, Palm Beach, Pasco, Pinellas

Part IX: Polk, Putnam, St. Johns, St. Lucie, Santa Rosa, Sarasota, Seminole

Part X: Sumter, Suwanee, Taylor, Union, Volusia, Wakulla, Walton, Washington

ABSTRACT

This report contains data from all of the 67 counties in the State of Florida, and from over 19,000 small quantity hazardous waste generators. Most of the firms and agencies providing hazardous waste data included in this report are small quantity hazardous waste generators as defined in the RCRA regulations. These data are displayed according to 26 waste types, 14 waste management methods and 514 industries as defined by four-digit Standard Industrial Classification codes. This report contains individual county data for each of the 67 counties in the State of Florida summarized and presented by these waste types, waste management methods, and Standard Industrial Classification codes. This report also contains statewide data aggregated across all of the 67 counties in the State of Florida by these waste types, waste management methods, and Standard Industrial Classification codes.

These data indicate that there are approximately 129,000 tons of small quantity generator hazardous waste produced annually in the State of Florida. Approximately 35 percent of these wastes are recycled, while approximately 23 percent of these wastes are disposed in sanitary landfills in the State of Florida.

In terms of weight, the major types of waste disposed in sanitary landfills are "Waste Oils, Lubricants" (45 percent), "Lead-Acid Batteries" (12 percent), "Spent Solvents" (11 percent), and "Sludges with Heavy Metals" (5 percent). Even though waste oils are not regulated as a hazardous waste under the RCRA, they were included in the county-level surveys conducted in the State of Florida.

Counties in the State of Florida are relatively diverse in terms of geography, population size and growth, and economic activities. As such, these Florida data on small quantity generator hazardous waste are generally representative of the types and quantities of these wastes produced, and the management practices used, nationwide by small quantity hazardous waste generators.

SECTION 1

INTRODUCTION

The 1984 Hazardous and Solid Waste Amendments to RCRA require the U.S. Environmental Protection Agency (EPA) to complete a study of the adequacy of the current Subtitle D programs in the States and to report to Congress within 36 months of enactment of the amendments. The study is to evaluate the current criteria regarding protection of public health and the environment from problems associated with groundwater contamination. The study is to include a detailed assessment of the adequacy of groundwater monitoring programs at Subtitle D facilities, as well as a recommendation to Congress concerning what enforcement authorities are needed to properly implement the program.

After completion of this study, the EPA is to revise, where necessary, the criteria for facilities that receive household and small quantity generator hazardous waste. The revisions are to include all steps necessary to protect human health and the environment. The amendments specify that, at a minimum, the revisions should require groundwater monitoring as necessary to detect contamination. Information on the types and quantities of hazardous waste typically entering the Subtitle D facilities is important in order to properly design monitoring systems to detect contamination. The 1984 RCRA amendments require the states to adopt and implement Subtitle D permitting programs that are to be approved by the EPA, or that are equivalent or similar to the federal program as defined by current or revised criteria.

An important component in assessing groundwater monitoring programs at Subtitle D facilities is the acquisition of data on the composition of wastes managed at these facilities. The purpose of this report is to provide the EPA with data on potentially hazardous waste generated and managed in the State of Florida, as well as with information on sanitary landfills in Florida. The sanitary landfills described in the study are those that reside in the counties that have provided the hazardous waste generation and management data.

This report consists of eleven parts. Parts I-X of the report are called County Data and contain individual county data for all 67 counties in the State of Florida and, as a result, cover the hazardous waste management activities of small quantity generators for the entire State of Florida. Part XI of the report is called Study Area Data and it contains data aggregated across all of the 67 counties in the State of Florida. Each county is described in terms of location, economic profile, and demographic characteristics. The counties are listed in alphabetical sequence within each of the first ten parts of the report. The specific counties that are included in each part of the county data (Parts I-X) are specified in the Foreword (p. iii).

SECTION 2

METHODOLOGY AND STUDY AREA

METHODOLOGY

The data contained in this report on hazardous waste generation and management, and sanitary landfills were acquired from the Florida Department of Environmental Regulation (FDER). The hazardous waste data were collected as part of a statewide local government hazardous waste assessment program administered by the FDER. These data have been compiled to assist the EPA in evaluating facilities (sanitary landfills) regulated under Subtitle D of the RCRA so that appropriate groundwater monitoring programs can be established at these facilities. The data contained in this report will assist the EPA in defining the problems associated with hazardous waste disposal in sanitary landfills and with other management methods used by small quantity generators of hazardous waste. In addition, these data can provide information that the agency can use in determining the regulatory status of waste oil in the context of the RCRA concerns.

The data are presented in tabular form by amount, type, waste management method, and Standard Industrial Classification (SIC) code. Waste amounts are in units of pounds for the county data (Parts I-X) and in units of tons for the study area aggregated data (Part XI). There are (26) waste types and (14) waste management methods into which the data are arranged. In addition, there are 514 four-digit Standard Industrial Classification codes into which the data have been cross-tabulated and arranged.

It should be noted that an initial list of approximately 400 SIC codes was prepared by the FDER, and this list was used by the counties in identifying potential generators of hazardous waste. The number of SIC codes for which data are presented in this report reflects the SIC codes actually reported by the potential generators responding to the survey. Some survey respondents, for example, changed the SIC code on the survey form sent to them, to an SIC code that more closely reflected the primary activity of the firm as judged by the respondent. The changing of SIC codes by survey respondents resulted in SIC codes that are not on the initial FDER list, but are, nevertheless, contained in this report. As a result, the total number of SIC codes for which data are presented in this report is 514.

The county level data were provided by the FDER and merged into a single data file for computer manipulation. Due to the decentralized way that the data were collected, keypunched, and coded, some deficiencies exist in the data and should be noted. First, Bay, Broward, Dade, Escambia, Monroe, Okaloosa, Santa Rosa, and Walton counties utilized a waste management category called "Picked Up by a Private Hauler." When these data were processed by the counties, they were coded into the category "City, County, or Private Hauler Takes Waste to the Landfill." Although unknown, it may be that some of these wastes were recycled or managed in ways other than disposal in sanitary landfills. A significant amount of these wastes are waste oils, lead-acid batteries, spent solvents, and empty pesticide containers. This coding procedure over-estimates the amount of waste managed at sanitary landfills in these counties.

Second, De Soto, Hardee, Highlands, Okeechobee, and Polk counties also utilized a waste management category on their survey form called "Picked Up by a Private Hauler." However, in this case, these counties did not specify where this material was taken for ultimate management, whereas, in the previous case, it was assumed that all waste that was reported picked up by a private hauler was, in turn, taken to a sanitary landfill. Wastes reported managed in this category for these counties have been consolidated into the waste management category "Other" in this report. Much of the wastes reported managed by this method are wastes that typically have secondary market value (e.g., waste oils, lead-acid batteries, spent solvents, and empty pesticide containers). It is likely that some of these waste were ultimately recycled. It is not possible to determine the ultimate management fate of wastes reported in this category on the survey forms. The use of the category "Picked Up by a Private Hauler" under-estimates the amounts and types of waste managed at sanitary landfills for these counties.

Upon examining the data in terms of the waste types generated by Standard Industrial Classification (SIC) codes, some anomalies have been identified. These anomalies relate to the reported generation of, for example, dry cleaning filters, waste explosives, and photographic wastes by industries that typically would not generate these types of wastes (e.g., Plumbing, Heating and Electrical Establishments, Gasoline Service Stations, Boat Building and Repair Shops, Trucking Companies, General Automotive Repair Shops, Reupholstery and Furniture Repair Shops, Motor Vehicle Dealers and Automobile and Home Supply Stores). The presence of these anomalies in the data does not significantly affect the overall distributions of waste types generated or waste management methods reported used by generators participating in the assessments. As with any large, decentralized data base, it is anticipated that errors relating to respondent accuracy, coding and keypunching have occurred.

The data relating to sanitary landfills in the study area were obtained from the FDER. The FDER maintains a data file on all sanitary landfills in the State of Florida. The data in the FDER file are for all classes of landfills, and for landfills that are closed, inactive, or active. The data presented in this report are only for landfills that are in use (i.e., permit status: active) and of Class I, II, or III.

Sanitary landfill facility classes are defined by the FDER as follows:

Class I Landfill	Landfill receiving some putrescible waste or garbage with total disposal in excess of 20 tons or 50 cubic yards (compacted) per day. Daily cover is required.
Class II Landfill	Landfill receiving some putrescible waste or garbage with total disposal of less than 20 tons or 50 cubic yards per day. Minimum cover is once every four days.

Class III Landfill	Landfill receiving only non-putrescible waste (i.e., trash, demolition and construction debris, yard trash, etc.). Minimum cover requirement is once per week.

The data file maintained by the FDER consists primarily of information contained in the facility permit, as well as a historical log of permit activities, including operational deficiencies at the facility. Printouts of each of the 160 active sanitary landfills that are in the 67 counties in the State of Florida are contained in Appendix D of Part XI of the report (Study Area Data), and definitions of the facility profile codes used in the FDER printouts are contained in Appendix E of Part XI of the report (Study Area Data).

In the appendices of Parts I-X of the report (County Data), there are displays that contain 21 summary characteristics for each active sanitary landfill in the State of Florida. These summary characteristics have been extracted from the facility printouts contained in Appendix D of the Study Area Data.

STUDY AREA

The study area for this report is the entire State of Florida including all 67 counties and is shown in Figure 1. Florida counties are diverse in terms of population, location, and economic profile. These counties consist of: highly populated, urban areas; areas with relatively low population or rural areas; coastal and non-coastal areas; relatively industrialized areas with varied manufacturing activities; and, areas that are relatively non-industrialized. In the appendices of Parts I-X of the report (County Data), each county is briefly described in terms of location, population, and economic activities occurring in the county.

SECTION 3

HAZARDOUS WASTE GENERATOR DATA AND CHARACTERISTICS OF SANITARY LANDFILLS

HAZARDOUS WASTE GENERATOR DATA

The hazardous waste generator data for the counties included in this part of the report are presented in the Appendices of this part. These data provide information on the hazardous waste generation and management practices of smaller hazardous waste generators in these counties, particularly as they relate to the use of sanitary landfills for disposal of these wastes.

The county hazardous waste data included in this report are presented in the following displays:

- Types and Amounts of Hazardous Waste Generated Annually;
- Hazardous Waste Management Practices;
- Hazardous Waste Disposed in Sanitary Landfills Annually;
- Hazardous Waste Generated by Standard Industrial Classification Code;
- Hazardous Waste Types Generated by Standard Industrial Classification Code;
- Hazardous Waste Management Methods Used by Standard Industrial Classification Code; and
- Hazardous Waste Types Generated by Standard Industrial Classification Code by Management Method.

All hazardous waste data included in the report were collected as survey data under the Florida Local Government Hazardous Waste Assessment Program. A major goal of the Florida Local Government Hazardous Waste Assessment Program is to address the problems associated with hazardous waste mismanagement, particularly as this mismanagement relates to smaller quantity generators. This program requires all counties in the State of Florida to conduct assessments of hazardous waste related activities in their jurisdictions using guidelines developed by the Florida Department of Environmental Regulation (FDER). One component of the county assessments consists of a survey of hazardous waste generators. Generators in each county were identified using a list of approximately 400 Standard Industrial Classification (SIC) codes. This SIC list was assembled initially by the EPA Office of Solid Waste for use in its national survey of small quantity generators. The EPA list was subsequently expanded to include firms that are of particular significance to the State of Florida (e.g., Boat Building and Repair), as well as to include those firms that are involved with the production or use of waste oil. Although waste oils are not regulated as a hazardous waste under the RCRA, waste oils were included in the State of Florida surveys.

The survey data were collected utilizing questionnaires sent through the mail and on-site interviews. All county data were intended to be made available to the FDER in a predetermined format so that the data could be merged into regional assessments, as well as a statewide assessment of hazardous waste generation and management practices.

All counties in the State of Florida received funding from the state to complete the surveys. The funding received by the counties was based upon population. The surveys were conducted under a variety of agreements involving county governments, regional planning agencies, private consultants, and combinations of these entities. For example, some counties conducted their own surveys while utilizing a consultant to process the data, while some of the larger counties completed all aspects of the survey in-house. The result was the collection of data through a number of individual but coordinated efforts.

The waste generation and management data consist primarily of responses from small quantity hazardous waste generators. However, some of the county data are not separated by large quantity generator data and by small quantity generator data. Overall, the portion of large quantity generator waste in these data is not significant.

CHARACTERISTICS OF SANITARY LANDFILLS IN THE STATE OF FLORIDA

This report contains information on sanitary landfills that are receiving potentially hazardous wastes. The characteristics of these sanitary landfills were obtained from the FDER. These data have been extracted from the facility permits and are maintained by the FDER in a facility data file (data file: GMS 25). Individual facility printouts for all active sanitary landfills in the State of Florida are contained in Appendix D of this part of the report (Part XI). Corresponding landfill characteristics for the 160 individual active sanitary landfills in the State of Florida are contained within the appendices of Parts I-X (County Data) of the report. The sanitary landfill information is summarized and displayed in tabular form, and is constructed from a list of twenty-one characteristics. These sanitary landfill characteristics are:

- Class of Landfill
- Responsible Authority
- Design Capacity
- Population Served
- Disposal Method
- Waste Types Accepted
- Land Owner
- Disposal Acreage
- Waste per Day Accepted
- Total Acreage
- Landfill Type
- Years in Operation
- Gas Control Used
- Cell Depth
- Depth to Water Table
- Soil Permeability
- Liner Material
- Number of Monitoring Wells
- Approved GW Monitoring Plan
- Adjacent Land Use
- Number of Surface Monitoring Points

APPENDIX A:

Martin County

MARTIN COUNTY

Martin County, shown in the following figure, is located in the southeastern portion of Florida along the Atlantic coastline, and the area of Martin County is 555 square miles. While the western portions of the county remain relatively undeveloped, the coastal area is undergoing rapid growth. In 1970, the population was 28,035, while the population in 1983 was 74,143. The 1990 population is estimated to reach 100,900, which represents an increase of 36 percent over the 1983 population and a 260 percent increase in population over the 1970 population in Martin County. Stuart is the largest city in Martin County with 9,979 residents in 1983.

Total employment in Martin County in 1983 was 25,680. Services was the largest employment sector with 7,274 employees, representing 29 percent of total employment. This was followed by Retail Trade with 6,018 employees and 24 percent of total employment. Manufacturing and Construction contributed 11 percent and 10 percent respectively to the employment total. Agriculture, and Finance, Insurance, and Real Estate each contributed approximately 6 percent to total employment. All other sectors contributed 6 percent or less to total employment in the county.

There are two active landfills in Martin County, the Martin County Sanitary Landfill #1 (Class I) and the Martin County Sanitary Landfill #2 (Class I). The Martin County Sanitary Landfill #1, formerly the Palm City #1 Landfill, is a highrise type facility. In 1980, the site was listed as an open dump. The Martin County Landfill #1 is to be phased out and replaced by the Martin County Landfill #2. The Martin County Landfill #2 (formerly Palm City #2) is in the same general area as Martin County Sanitary Landfill #1 and began operation in July 1985. This landfill has a synthetic liner, a leachate control and recirculation system, and gas vents.

APPENDIX B:

Monroe County

MONROE COUNTY

Monroe County, shown in the following figure, is located at the southern tip of Florida. Monroe County encompasses the Florida Keys which stretch southwesterly from the mainland for over a hundred miles. Monroe County is 1,034 squares miles in area. The 1970 county population was 52,586. By 1983, the population had risen to 66,605 residents. The projected 1990 population is expected to increase by 9 percent over the 1983 population to 72,300 residents. The city of Key West is the largest incorporated area in Monroe County with a 1983 population of 24,968 residents.

Total employment in Monroe County is 22,235, with Services representing 34 percent of the total. Retail Trade is the second largest employment sector contributing 28 percent of the total. The Transportation, Communication, and Public Utilities and Government employment sectors each provide employment for 9 percent of the total. The Finance, Insurance, and Real Estate category represents 7 percent of the total number employed. All other sectors each contribute less than 6 percent of total employment for Monroe County.

In Monroe County there are three active landfills, all of which are Class I facilities. The Long Key Sanitary Landfill is a highrise facility and was listed as an open dump in 1981. The permit for this facility included the installation of monitoring wells and construction of ditches for collection of surface and subsurface runoff. None of these structures have been constructed. Violations, including open burning, have occurred at this site. The county has been required to find a new landfill site. The Cudjoe Key Sanitary Landfill was also classified as an open dump in 1981. The permit for this site was issued over the objections of local residents. Fire protection is lacking at the site, and there are problems associated with open burning and with septic tank disposal. The Key Largo Landfill is an area-type landfill. Little information was available on this site.

APPENDIX C:

Nassau County

NASSAU COUNTY

Nassau County, shown in the following figure, is located in the northeastern portion of Florida along the Florida-Georgia border and the Atlantic Ocean. The area of Nassau County is 671 square miles. The largest city in Nassau County is Fernadina Beach which contains about 20 percent of the county's total population. The 1970 population of the county was 20,625 and the 1980 population was 32,890. In 1983, the county population had risen to 36,320.

The three main employment sectors in Nassau County are Services (28%), Manufacturing (24%), and Retail Trade (18%). All other employment sectors contribute 5 percent or less to total employment in the county.

Within Nassau County are four active landfills, one is a Class I landfill, two are Class II landfills, and one is a Class III landfill. The Lolten Creek Landfill is a Class I facility. The trench method is used at this facility. The Bryceville Sanitary Landfill (Class II) is a trench landfill adjacent to and south of an old landfill. The West Nassau Sanitary Landfill is also a Class II landfill at which the trench method is used. The trench operation at this facility allows for only a 15 inch separation between the bottom of the refuse and the water table. The trench method is also used at the C-108 Demolition Debris Landfill (Class III).

APPENDIX D:

Okaloosa County

OKALOOSA COUNTY

Okaloosa County, shown in the following figure, is located in the western region of the Florida Panhandle and is 936 square miles in area. The 1970 population of Okaloosa County was 88,187. In 1983, the population was 122,547 residents, and is projected to rise 18 percent to 144,400 residents by 1990. The major metropolitan area in Okaloosa County is the city of Fort Walton Beach with 21,560 residents.

Total employment in Okaloosa County is 37,014, and is accounted for primarily by Services (31%), Retail Trade (25%), Government employment (15%), and Manufacturing and Construction (8% respectively). Other employment sectors, including Finance, Insurance, and Real Estate; Transportation, Communication, and Public Utilities; and Wholesale Trade, each contribute less than 5 percent each to total county employment.

In Okaloosa County there are four active Class I landfills: Baker (#2) Landfill, Laurel Hill Sanitary Landfill, Niceville-Valparaiso Sanitary Landfill, and Wright Sanitary Landfill. The only landfill in the county with a liner is the Baker (#2) Landfill, which has a natural clay liner. None of the landfills has an approved groundwater monitoring plan. At the Baker (#2) landfill, the Laurel Hill Landfill, and the the Niceville-Valparaiso Landfill the trench method is used. At the Wright Landfill the wetland method is used. The marsh treatment at the Wright Sanitary Landfill is ineffective, and there is lateral flow of leachate south and southwest to Alligator Swamp. At the Baker Landfill (#2), only four of the six monitoring wells were considered adequate. From the Laurel Hill Landfill there is horizontal flow of leachate to Turkey Creek.

APPENDIX E:

Okeechobee County

OKEECHOBEE COUNTY

Okeechobee County, shown in the following figure, is located north of Lake Okeechobee and inland from the Atlantic coast. The county is 771 square miles in area and has a population density of 30 persons per square mile. In 1970 the population of the county was 11,233 and in 1980 it was 20,264, representing a 80.4 percent increase. The 1983 population was 22,867, and the projected 1990 population is 28,530. There is a single incorporated town in Okeechobee County, Okeechobee with a 1983 population of 4,343.

The largest percentage of the labor force in Okeechobee County (28 percent) is employed in the Services sector. Twenty-four percent is employed in the Retail Trade sector and 18 percent in Agriculture. There is virtually no manufacturing in Okeechobee County.

There are two landfills in Okeechobee County: the Class I Okeechobee Sanitary Landfill and the Class III Okeechobee County Yard and Trash Landfill. The Okeechobee Sanitary Landfill has a leachate recirculation system and a PVC liner and was designed to serve portions of Glades, Martin, and Highlands counties bordering on Lake Okeechobee as well as Okeechobee County. According to a 1985 University of Florida Landfill Closure study, the soil permeability at this site is in excess of 11 inches per hour. This same study reports that the PVC liner at the Okeechobee Sanitary Landfill was not installed properly. The height of the disposal area is 40 to 50 feet above ground level and inspection of the site by the Department of Environmental Regulation reported the initial cover to be inadequate and the side slope to be too steep. Stormwater problems have occurred at the site. The landfill does not have an approved groundwater monitoring plan. At the Okeechobee County Yard and Trash site, an inspection by the Department of Environmental Regulation revealed that the area has been accepting waste other than yard trash. In 1985 the Department of Environmental Regulation restricted the wastes disposed at the Okeechobee County Yard and Trash site to land clearing waste.

APPENDIX F:
Orange County

ORANGE COUNTY

Orange County, shown in the following figure, is located in the center of Florida and is comprised on 910 square miles. The population of Orange County in 1970 was 344,311, while in 1983 it was 507,572. In 1990, it is estimated that the population will be 596,700 which would represent an 18 percent increase over the 1983 population. The population density of Orange County in 1983 was 558 persons per square mile.

The largest city in Orange County is Orlando with a 1983 population of 133,311. Orlando is followed in size by Winter Park, with a 1983 population of 23,051. Ocoee is the third largest town in the county with a 1983 population of 10,314. This was followed by Maitland and Winter Garden, with 1983 populations of 9,113 and 6,753 respectively.

Total employment in Orange County in 1983 was 269,822. The Services sector is the largest employment category with 98,707 employees in 1983, which represents 37 percent of total employment. Services was followed by Retail Trade with 49,248 employees representing 18 percent of total employment. Manufacturing accounted for 11 percent of the total with 28,846 employees. The three employment sectors: Finance, Insurance, and Real Estate; Transportation, Communication, and Public Utilities; and Wholesale Trade each accounted for about 7 percent of total employment with 19,032, 18,185, and 17,909 employees respectively. All other employment sectors accounted for 6 percent or less of total employment.

There are four active landfills in Orange County, the Orange County Sanitary Landfill (Class I), and the Pine Hills Road Trash Site (Class III), the Bray Landfill (Class III), the Keene Road Landfill (Class III), and the Clark Landfill (Class III). The Keene Road Landfill and the Clark Landfill have natural clay liners and approved groundwater monitoring plans. The other sites in the county are unlined. The area method is used at the Pine Hills Road Trash Site and the Bray Landfill. The groundwater monitoring plan for the 1500-acre Orange County Sanitary Landfill was denied by the FDER because the site has no liners, and because it is not designed and operated in such a way to provide sufficient distance between the bottom of the waste and the water table. Leachate at this site has been found to contain heavy metals.
